As the examiner stated in the final rejection dated 29 April 2009, Kreuter and Ehlert fails to teach an applicator, extender and booster are integrally formed, the combination above discloses the claimed invention except for the parts being integrally form. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form them integrally, since it has been held that forming in one piece an article which has formerly been formed two pieces and put together involves only routine skill in the art. That is widely held case law and therefore is relevant to the present case.

Secondly, it is widely held that forming a device integrally would provide obvious cost advantages since it would be cheap to produce the device from one structure instead of combining multiple ones together.

Lastly, Ehlert does teach that its ultrasonic horn could be formed integrally as stated in col. 12 lines 23-31.
